# **Specification**

**Overall Dimensions:** 

Length (Std Machine) 4086 mm (13'-5")
Width 1795 mm (5'-11")
Height 1732 mm (5'-8")
Weight (net) 1150 Kg (2540 lbs)

**Power Supplies:** 

Electric Drive 415 volt 3 Phase 32

amp

PTO Drive speed max 480 rpm External Hydraulic 40 lpm @ 190bar

**Split Force:** 

Normal Operation 95 kN Maximum 150 kN

**Cycle Time:** 

Adjustable via control knob minimum of 5.4 s at 40 lpm & 33 cm stroke

**Timber Input:** 

Diameter 40 cm (16") maximum diameter

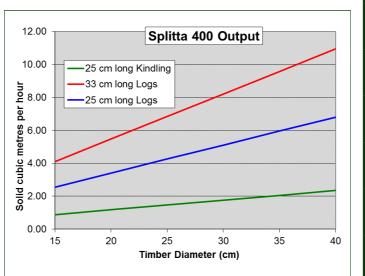

10 cm (4") minimum diameter

Length 20 cm to 33 cm (8" to 13")

adjustable via separate kits

**Timber Output:** 

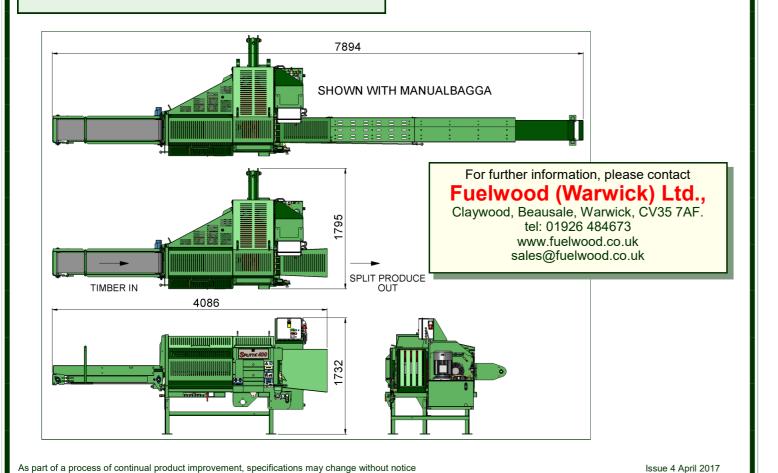

Split Section size 20 to 120 mm
See chart for volume output

The above chart is based on continuous operation of the machine when processing a variety of timber diameters at the lengths shown and is quoted in solid cubic metres

When split into logs, 1 solid cubic metre will give a loose volume of between 1.5 and 1.8 cubic metres

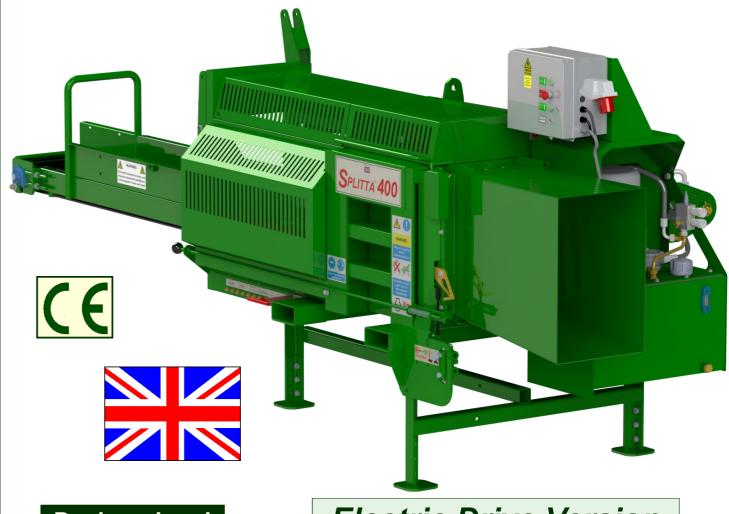

Typical measured output is 1 cubic metre bulk bag filled in 5 minutes (equivalent to about 8 solid m3 / hour)

# SPLITTA 400

20 to 33 cm long Logs One machine does all Kindling as well 4 to 11 solid m3 per hour

Log and Kindling Production Machine designed to process large timber rings and convert them to Logs Ideal for handling Arb Waste Same machine can also produce kindling

Designed and Made in Britain

**Electric Drive Version** 

Hydraulic Version

- Can be used with any hydraulic power source that meets the specification and has cooling
- Supplied with 3 metre hydraulic hoses

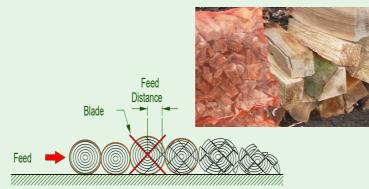

## **CLEANA**

- Removes slivers and debris
- Directs waste into bulk bags
- Adjustable angle

#### SPLITTA 400

Splitta 400 is a fully automated splitting machine that splits timber rings using an 'X Blade'. This ensures a consistent section size of the split timber regardless of the input diameter. This section size is adjustable to allow the Operator to vary the split output between kindling and small logs through to large logs.

Splitta 400 builds on the experience gained in the development and production of Kindla, Kindlet and Splitta to deliver a machine that can handle larger and longer timber rings. This makes it ideal for handling the larger waste resulting from Arboriculture operations.

- Various power options Electric. PTO, Own hydraulic
- Adjustable cycle time to suit operational conditions
- Timber diameters from 10 cm to 40 cm
- Timber ring lengths adjustable from 20 cm to 33 cm
- Adjustable section size 20 cm to 120 cm
- Splitting force up to maximum of 15 tonnes

AND

**DEBRIS** 

Forklift Pockets

**ROTATES ON** 

SWIVEL WHEELS

· Various optional equipment available - see this page

### PETROL POWAPAK

- Kohler CH730 Vee Twin Engine
- Electric start
- Double Pump system
- Adjustable engine speed
  Main circuit 40 lpm @ 2900 rpm & 190 bar
- Maximum 50 lpm @ 3600 rpm
- Auxiliary circuit 29 lpm @ 2900 rpm
- Aux circuit also provides cooling and filtration -(requires steady return flow)
- Large 18 Litre Fuel tank for prolonged running
- Oil cooler as standard
- Weight 250 kg
- Can be used with other equipment

## PTO Drive Version Shown with Manual Bagga and linked

to Woodcutta

Requires additional 3 point mounting

- For packing split produce into net bags
- Suitable for logs and kindling
- Adjustable for different lengths of produce
- Links to Splitta 400
- Adjustable height

#### Note:

1 solid m3 is equivalent to about 60 typical net bags (bag size 60 x 45)

Number of nets produced per hour will be limited by Operator efficiency

- Speed typically 25 metres/min belt speed • Weight - 360 kg
- Forklift pockets
